EDUCATION

Virtual University

Bachelors of Computer Science
2024

SKILLS

- Responsive Web Design
- WooCommerce Customization
- Website Maintenance & Security
- Elementor (Page Builder)
- Familiarity with Hosting Platforms
- Adobe Photoshop

PROJECTS

Blog Website

- For my blog website, my approach was to focus on simplicity, readability, and a clean design. I used WordPress with a lightweight theme and customized it using Elementor to ensure a responsive layout. I structured the site for easy content navigation, integrated essential plugins like Yoast SEO and Jetpack, and optimized loading speed. My goal was to create a user-friendly platform that encourages readers to stay engaged and explore multiple blog posts.

E-commerce Website

- While building the e-commerce website, I used WooCommerce on WordPress to create a fully functional online store. My focus was on product organization, secure checkout, and mobile responsiveness. I customized the theme to align with the brand's look and feel, added essential plugins for inventory, shipping, and payment gateways, and ensured the site followed best practices for performance and security. This project taught me a lot about user experience and conversion-focused design.

Travel Booking Website

- For the travel booking website, my goal was to provide an intuitive experience for users looking to book tours or services. I designed a modern, visually appealing layout using WordPress and a travel-friendly theme, incorporating features like booking forms, service filters, and user reviews. I also added call-to-action buttons and inquiry options to make the site interactive.
